The program then calculates the net money the user has to pay considering all the items the user has added to his cart.

The difference between the original price and discount price of all items purchased by the user is shown as the users profit.

Amount to be payed by the user includes the discount price of all items as well as a tax of 60% on the items.

The Delivery charges in case of Home Delivery is added to the amount to be payed

The program then generates the bill.

The bill displays date and time as well as the address of the shop.
